

Digital Literacy Project Report

Name: Girik Balhotra

Registration Number: 25BAI10197

Branch: B.Tech CSE

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

Introduction

In today's world, digital skills are essential for students not only for academics but also for communication, collaboration, and career growth. This project was completed as part of my role as a Student Digital Ambassador, where I explored different aspects of digital literacy through practical tasks. The project involved creating an infographic, building professional profiles, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness. Each task helped me develop a better understanding of how to use digital tools responsibly and effectively. This report summarizes my work, the tools I used, and the key learnings I gained throughout the project.

Task 1: Digital Literacy Infographic

For this task, I created a digital literacy infographic using **Canva**. I chose Canva because it is beginner-friendly and provides a wide range of templates and design elements. My infographic focused on three main topics: what digital literacy means, safe internet practices, and maintaining a professional online presence.

The design included simple icons, short definitions, and clear headings to make it easy to understand at a glance. I used minimal text and focused on visual clarity so that students can quickly grasp the concepts. For example, I highlighted safe practices like using strong passwords and avoiding suspicious links.

One challenge I faced was balancing content and design — it was difficult to include enough information without making the infographic look crowded. However, this helped me learn how to prioritize key points and present information visually. Overall, the experience improved my design skills and taught me how to communicate information effectively.

Task 2: Student Digital Portfolio

In this task, I created and updated my profiles on **GitHub**, **LinkedIn**, and **Kaggle**. Each platform serves a different purpose and is important for building a professional identity.

On GitHub, I created a profile README where I introduced myself, mentioned my branch, and shared my learning goals. This platform will help me showcase my coding projects in the future. On LinkedIn, I updated my education details, which will help me connect with professionals and explore internship opportunities. Kaggle was new to me, and I learned that it is useful for practicing data science and participating in competitions.

Over the next four years, I plan to regularly update these profiles with my projects, certifications, and achievements. Maintaining an active digital presence will help me build credibility and improve my chances of getting internships and job opportunities.

Task 3: Coding & Collaboration Platforms

For the coding practice part, I used **HackerRank** and completed a beginner-level problem. This helped me understand basic problem-solving and how coding platforms evaluate solutions. It was a good starting point for improving my programming skills.

For the collaboration part, I used **Google Forms** to create a Digital Literacy Awareness Quiz with five questions. I included both multiple-choice and short-answer questions. I also linked the form responses to a Google Sheet, which allows easy data collection and analysis.

This task showed me how useful these tools are in academics. Coding platforms help improve logical thinking, while Google Forms can be used for surveys, quizzes, and data collection in projects. These tools will be very helpful in assignments, group projects, and research work in the future.

Task 4: Email Etiquette & Communication

During this task, I learned how to write professional emails with proper structure, tone, and clarity. A common problem in digital communication is sending unclear or informal emails, which can create misunderstandings. For example, if a student sends an email without a subject line or proper greeting, the professor may ignore it or misunderstand the request.

This can be avoided by following basic email etiquette such as using a clear subject, polite language, and proper formatting. Writing the two emails helped me understand how to communicate respectfully and professionally. I also created a checklist of social media do's and don'ts, which will help students maintain a responsible online presence.

Digital Literacy Project Report

Task 5: Cybercrime Awareness

While researching cybercrime, I chose the topic of phishing. I learned how attackers trick users into sharing sensitive information through fake emails or websites. What surprised me the most was how realistic these scams can look, making it easy for people to fall victim.

This task made me more aware of online risks and the importance of being cautious while clicking links or sharing personal information. One habit I will change is always verifying the authenticity of emails and websites before taking any action. I also learned about reporting cybercrime through the official portal and helpline, which is useful information for everyone.

Conclusion

This project helped me understand the importance of digital literacy in both academic and professional life. I learned how to create visual content, build a professional online presence, use coding and collaboration tools, communicate effectively, and stay safe online. Each task provided practical knowledge that I can apply in real-life situations. Overall, this project improved my confidence in using digital tools and made me more responsible as a digital user. The skills I gained will be valuable throughout my college journey and future career.
