Report

Report on Professional Platforms

For this task, I created accounts on GitHub, LinkedIn, and Kaggle, as these are very useful platforms for students like me who want to build a strong career in the tech field.

GitHub is mainly used to upload and manage coding projects. It helps in keeping track of changes in code and also allows collaboration with others. LinkedIn is a professional platform where I can create my profile, connect with other people, and learn about job or internship opportunities. Kaggle is used for data science and machine learning practice, where I can work on datasets and take part in competitions.

In the future, I plan to actively use GitHub by uploading my projects regularly to build a good portfolio. On LinkedIn, I will keep my profile updated and connect with professionals to expand my network. On Kaggle, I want to improve my skills by practicing more and participating in competitions. These platforms will help me improve my knowledge and prepare for my future career.
